**Question 1**

Complete

Mark 1.00 out of 1.00

How can you prevent JWT replay attacks in sensitive RBAC-based applications?

- ☒ a. Implement rotating refresh tokens
- ☐ b. Use only the frontend to validate roles
- ☐ c. Store tokens in localStorage
- ☐ d. Use longer expiration time

**Question 2**

Complete

Mark 1.00 out of 1.00

If a user's role is updated from "editor" to "admin", but their JWT hasn't expired yet, what is a potential risk?

- ☒ a. Role update may not reflect until re-login
- ☐ b. Token size increases
- ☐ c. Signature gets mismatched
- ☐ d. Token becomes invalid immediately

**Question 3**

Complete

Mark 1.00 out of 1.00

In a RBAC model, which principle is crucial for minimizing access privileges?

- ☒ a. Least privilege
- ☐ b. Token obfuscation
- ☐ c. Time-based access
- ☐ d. Role inheritance

**Question 4**

Complete

Mark 1.00 out of 1.00

In a secure RBAC system, where should the logic for role-based route protection ideally reside?

- ☐ a. Frontend only
- ☒ b. Middleware or backend route handlers
- ☐ c. JWT header
- ☐ d. Database triggers

**Question 5**

Complete

Mark 1.00 out of 1.00

What change should be made to the following JWT-based login handler to add RBAC? `const token = jwt.sign({ id: user.id }, 'mysecret');`

- ☒ a. Add role: `user.role` to payload
- ☐ b. Add user email to the payload
- ☐ c. Encrypt the token
- ☐ d. Use HS512 algorithm

**Question 6**

Complete

Mark 1.00 out of 1.00

What is a secure way to refresh a short-lived JWT without asking the user to log in again?

- ☐ a. Use a cookie-stored access token
- ☐ b. Use the same JWT for 1 year
- ☒ c. Use a secure refresh token mechanism
- ☐ d. Store token in `sessionStorage`

**Question 7**

Complete

Mark 1.00 out of 1.00

What is the primary purpose of the JWT signature?

- ☐ a. Stores expiration timestamp
- ☒ b. Validates the integrity and authenticity of the token
- ☐ c. Prevents cross-site scripting attacks
- ☐ d. Encrypts the token data

**Question 8**

Complete

Mark 1.00 out of 1.00

What is the problem with the following code if used in production? `const token = jwt.sign({ userId: 1 }, '123', { expiresIn: '2h' });`

- ☐ a. Token will never expire
- ☐ b. It uses numeric user ID
- ☐ c. Nothing, it's secure
- ☒ d. The secret is weak and predictable

**Question 9**

Complete

Mark 1.00 out of 1.00

What will happen if the secret key used to sign a JWT is leaked?

- ☐ a. Token will become unreadable
- ☐ b. Signature verification will be stricter
- ☐ c. JWTs will auto-expire
- ☒ d. Any user can generate valid tokens

**Question 10**

Complete

Mark 1.00 out of 1.00

Which claim in a JWT helps enforce token expiration?

- ☐ a. sub
- ☐ b. aud
- ☒ c. exp
- ☐ d. iat

**Question 11**

Complete

Mark 1.00 out of 1.00

Which part of a JWT is typically used to store user roles for implementing RBAC?

- ☐ a. Signature
- ☐ b. Header
- ☒ c. Payload
- ☐ d. Token Expiry

**Question 12**

Complete

Mark 1.00 out of 1.00

Why is storing a JWT in localStorage considered risky in web applications?

- ☐ a. It cannot be read by JavaScript
- ☒ b. It's vulnerable to XSS attacks
- ☐ c. It increases backend load
- ☐ d. It expires too quickly

**Question 13**

Complete

Mark 0.00 out of 1.00

Given the following code, which statement is true?

```
const MyComponent = React.memo(({ onClick }) => {  
  console.log("Rendered");  
  return <button onClick={onClick}>Click</button>;  
});
```

What must be true for React.memo to prevent re-renders when parent re-renders?

- ☐ a. onClick must be declared outside the parent component
- ☒ b. onClick must be memoized using useMemo
- ☐ c. React.memo always skips rendering regardless of prop types
- ☐ d. onClick must be stable across renders (e.g., memoized using useCallback)

**Question 14**

Complete

Mark 1.00 out of 1.00

In which of the following scenarios is useMemo most beneficial?

- ☒ a. To optimize expensive computations based on stable inputs
- ☐ b. To store global constants across modules
- ☐ c. To memoize functions used as event handlers
- ☐ d. To prevent unnecessary re-renders of pure components

**Question 15**

Complete

Mark 1.00 out of 1.00

Consider the following component:

```
const List = React.memo(({ items }) => {  
  return items.map(item => <div key={item.id}>{item.name}</div>);  
});
```

If the parent re-renders but passes the same array reference for items, what happens?

- ☐ a. React.memo deep compares array values
- ☐ b. React.memo skips rendering only if keys are stable
- ☐ c. React.memo causes List to re-render
- ☒ d. React.memo skips rendering because the array reference is unchanged

**Question 16**

Complete

Mark 1.00 out of 1.00

Why might excessive use of useMemo lead to performance degradation rather than improvement?

- ☒ a. Creating memoized values and comparing dependencies has computational cost
- ☐ b. React re-renders the component regardless of useMemo
- ☐ c. useMemo causes stale closures
- ☐ d. useMemo increases memory usage permanently
